

The Future of Credit Decisioning

Prototype Showcase & Technical Documentation

A state-of-the-art intelligent credit decision platform designed for BFSI firms, automating credit assessments, risk evaluation, and application workflows using next-generation AI and financial modeling.

1. Platform Overview

Aurora Credit OS reduces credit decision cycles from weeks to hours, transforming legacy workflows into highly orchestrated, data-rich processes.

Key Value Propositions:

- **Zero Document Chaos:** Fully automated ingestion and tagging.
- **Explainable Analytics:** 5C modeling (Character, Capacity, Capital, Collateral, Conditions).
- **Compliance Ready:** Unalterable audit logs and RBAC security models.

2. Product Interface Showcase

Below are visual insights into the Aurora Credit OS, highlighting key functional modules.

2.1 Command Overview (Dashboard)

The centralized cockpit for real-time visibility into your entire credit portfolio. Tracks exposure, processing speed, and approval bottlenecks at a glance.

CreditSense Dashboard

Real-time metrics overview with KPIs

Module Details

- Comprehensive feature set
- Real-time data processing
- Advanced filtering and search

Key Features

- Role-based access control
- Audit logging and compliance
- Mobile responsive design

CreditSense Interface

Key Highlights:

- Real-time pipeline status
- Aggregate exposure metrics
- Task assignments and pending actions

2.2 Application Management

Complete tracking of every loan request traversing the approval pipeline.

Applications Listing

Paginated application list with filtering

Module Details

- Comprehensive feature set
- Real-time data processing
- Advanced filtering and search

Key Features

- Role-based access control
- Audit logging and compliance
- Mobile responsive design

CreditSense Interface

 Active

24

 Pending

24

 At Risk

24

Key Highlights:

- Stage-gated workflows (Screening, Underwriting, Committee, etc.)
- Multi-lane processing for fast-tracking reliable borrowers
- Intuitive filtering and tagging

2.3 Company Intelligence

A 360-degree view of borrowing entities. This builds an intelligence graph stitching together KYC, sentiment, and financial history.

Companies Directory

Company profiles and risk classification

Module Details

- Comprehensive feature set
- Real-time data processing
- Advanced filtering and search

Key Features

- Role-based access control
- Audit logging and compliance
- Mobile responsive design

CreditSense Interface

Key Highlights:

- Deep integration with regulatory registries
- Corporate hierarchies and UBO tracing
- Credit footprint evaluation

2.4 Document Processing Hub

An automated bay where chaotic financial documents are securely validated and parsed.

Documents Management

Upload, classify, and verify documents

Module Details

- Comprehensive feature set
- Real-time data processing
- Advanced filtering and search

Key Features

- Role-based access control
- Audit logging and compliance
- Mobile responsive design

CreditSense Interface

Key Highlights:

- Secure GST, Bank Statement, and ITR ingestion
- Auto-tagging of unstructured data
- Machine learning extraction pipelines

2.5 Risk & Compliance Evaluation

Automated anomaly detection and robust governance controls safeguarding your portfolio.

Risk Analysis

Portfolio risk assessment and analytics

Module Details

- Comprehensive feature set
- Real-time data processing
- Advanced filtering and search

Key Features

- Role-based access control
- Audit logging and compliance
- Mobile responsive design

CreditSense Interface

Key Highlights:

- Fraud ring detection (e.g., circular trading alerts)
- Blacklist screening and regulatory checks
- Deep anomaly alerts on uploaded document sets

2.6 Dynamic Score Studio

Where raw numbers meet the "Five-C" framework. Transparent logic allows credit officers to accept or challenge AI-generated ratings.

Credit Scores

Five-C analysis and scoring results

Module Details

- Comprehensive feature set
- Real-time data processing
- Advanced filtering and search

Key Features

- Role-based access control
- Audit logging and compliance
- Mobile responsive design

CreditSense Interface

Key Highlights:

- IIT-grade ML risk modeling integration
- Granular breakdown of score drivers and mitigants
- Automatic CAM (Credit Appraisal Memo) generation

3. Core Technical Architecture

The system is meticulously decoupled, relying on modern patterns for extreme scalability.

- **Frontend Ecosystem:** Next.js 14, React 18, Tailwind CSS, Lucide Icons
- **Backend Services:** Node.js 24.x, Express API, Prisma ORM
- **Database Engine:** PostgreSQL (Transactional), MongoDB (Doc Storage, Schema-less Templates)
- **Security:** Advanced JWT verification, granular session lifetimes, Bcrypt hashing.

4. Deployment Details

The Aurora Credit OS prototype can be spun up in containerized environments effortlessly.

```
# Start required databases
docker-compose up -d

# Backend Launch
cd backend
npm install && npx prisma generate && npx prisma db push
npm start

# Frontend Launch
```

```
cd frontend  
npm install  
npm run dev
```
